1 Descripción del repositorio

- Directorio con archivos requeridos para ejecutar GADGET
- Directorio con archivos requeridos para ejecutar SS3
- Directorio con ejecutable SS3 para tres sistemas operativos (windows, linux y mac)
- Códigos Rmarkdown (pdf o html) que permita modificar archivos SS3
 - formato data.ss
 - formato contro.ss
 - formato starter.ss
 - formato forecast.ss

2 Descargar archivos requeridos desde repositorio

Tarea pendiente. . .

3 Librerías requeridas

3.1 Identificamos los directorio de trabajo

```
dirname_base <- here("modelos_SS3","simple")
#dirname_base <- here("10a_anchcadiz")
dirname_mod <- here("boqueron_SS3")
```

3.2 Leer los archivos de Stock Synthesis con la función SS_read()

```
inputs <- r4ss::SS_read(dir = dirname_base)
names(inputs)
## [1] "dir"      "path"     "dat"      "ctl"      "start"    "fore"     "wtatage"
## [8] "par"
#trabajaremos con archivo fore
fore<-inputs$fore # archivo base
fore1<-fore # archivo modificado
```

3.3 Investigar el modelo

Cada uno de los archivos de entrada se lee en R como una lista.

Use `names()` para ver todos los componentes de la lista

3.4 Revisamos los nombres de los componentes de la lista del archivo control que deseamos modificar

```
names(fore)
## [1] "warnings"
## [2] "SSversion"
## [3] "sourcefile"
## [4] "type"
## [5] "benchmarks"
## [6] "MSY"
## [7] "SPRtarget"
## [8] "Btarget"
## [9] "Bmark_years"
```

```
## [10] "Bmark_relF_Basis"
## [11] "Forecast"
## [12] "Nforecastyrs"
## [13] "F_scalar"
## [14] "Fcast_years"
## [15] "Fcast_selex"
## [16] "ControlRuleMethod"
## [17] "BforconstantF"
## [18] "BfornoF"
## [19] "Flimitfraction"
## [20] "N_forecast_loops"
## [21] "First_forecast_loop_with_stochastic_recruitment"
## [22] "fcast_rec_option"
## [23] "fcast_rec_val"
## [24] "Forecast_loop_control_5"
## [25] "FirstYear_for_caps_and_allocations"
## [26] "stddev_of_log_catch_ratio"
## [27] "Do_West_Coast_gfish_rebuilder_output"
## [28] "Ydecl"
## [29] "Yinit"
## [30] "fleet_relative_F"
## [31] "basis_for_fcast_catch_tuning"
## [32] "N_allocation_groups"
## [33] "InputBasis"
## [34] "eof"
```

Los primeros 4 elementos de la lista no son considerados para cambiar:

- warnings
- SSversion
- sourcefile
- type

Desde benchmarks comenzamos a cambiar las opciones o valores específicos para el recurso evaluado:

3.5 Puntos de referencia asociados a la Biomasa y mortalidad por pesca

- **benchmarks:** elegir una de estas opciones, 0=skip; 1=calc F_spr,F_btgt,F_msy
- **MSY:** elegir una de estas opciones, 1= set to F(SPR); 2=calc F(MSY); 3=set to F(Btgt); 4=set to F(endyr)
- **SPRtarget:** escribir un valor de 0 a 1, por ejemplo, e.g. 0.40
- **Btarget:** escribir un valor de 0 a 1, por ejemplo, e.g. 0.40
- **Bmark_years:** beg_bio, end_bio, beg_selex, end_selex, beg_relF, end_relF, beg_recr_dist, end_recr_dist, beg_SRparm, end_SRparm (enter actual year, or values of 0 or -integer to be rel. endyr)
- **Bmark_relF_Basis:** 1 = use year range; 2 = set relF same as forecast below
- **Forecast:** 0=none; 1=F(SPR); 2=F(MSY) 3=F(Btgt); 4=Ave F (uses first-last relF yrs); 5=input annual F scalar
- **Nforecastyrs:**
- **F_scalar:** F scalar (only used for Do_Forecast==5)
- **Fcast_years:** beg_selex, end_selex, beg_relF, end_relF, beg_recruits, end_recruits (enter actual year, or values of 0 or -integer to be rel. endyr)
- **Fcast_selex:** Forecast selectivity (0=fcast selex is mean from year range; 1=fcast selectivity from annual time-vary parms)
- **ControlRuleMethod:** Control rule method (1=catch=f(SSB) west coast; 2=F=f(SSB))

- BforconstantF: Control rule Biomass level for constant F (as frac of Bzero, e.g. 0.40); (Must be > the no F level below)
- BfornoF: Control rule Biomass level for no F (as frac of Bzero, e.g. 0.10)
- Flimitfraction: Control rule target as fraction of Flimit (e.g. 0.75)
- N_forecast_loops: 1=OFL only; 2=ABC; 3=get F from forecast ABC catch with allocations applied)
- First_forecast_loop_with_stochastic_recruitment: First forecast loop with stochastic recruitment
- fcast_rec_option: Forecast loop control #3 (reserved for future bells&whistles)
- fcast_rec_val: Forecast loop control #4 (reserved for future bells&whistles)
- Forecast_loop_control_5: Forecast loop control #5 (reserved for future bells&whistles)
- FirstYear_for_caps_and_allocations: FirstYear for caps and allocations (should be after years with fixed inputs)
- stddev_of_log_catch_ratio: stddev of log(realized catch/target catch) in forecast (set value>0.0 to cause active impl_error)
- Do_West_Coast_gfish_rebuilder_output: Do West Coast gfish rebuilder output (0/1)
- Ydecl: Rebuilder: first year catch could have been set to zero (Ydecl)(-1 to set to 1999)
- Yinit: Rebuilder: year for current age structure (Yinit) (-1 to set to endyear+1)
- fleet_relative_F: fleet relative F: 1=use first-last alloc year; 2=read seas, fleet, alloc list below

Note that fleet allocation is used directly as average F if Do_Forecast=4 basis for fcast catch tuning and for fcast catch caps and allocation

- basis_for_fcast_catch_tuning: 2=deadbio; 3=retainbio; 5=deadnum; 6=retainnum

```

3.5.1 Escribir archivo de forecast modificado con la función SS_write para el enfoque de modelación SS3

```

#-----
r4ss::SS_writeforecast(mylist=fore1,
                      dir=here(dirname_mod),
                      file="forecast.ss",
                      overwrite = TRUE,
                      verbose = TRUE)
#-----

```

4 comprobar si el modelo corre al modificar este archivo

```
exe_path <- here("Ejecutables_SS3", "3.30.18_release")
ss_exe_mac <- paste(exe_path, "ss_osx", sep= "/")

r4ss::run(
  dir = dirname_mod,
  exe = ss_exe_mac,
  extras = "",
  skipfinished = FALSE,
  show_in_console = TRUE,
  verbose = TRUE
)
```
